

Artist: JupiterFab

I am a multimedia artist. My main focus are murals and projects with social impact.

My works are always social orientated. In particular, I have been leading and cooperating in several projects together with marginalized communities around the world. I paint on walls and on canvas, I create art installations, sound installations and sound and video documentaries.

In my works, I immortalize daily life's scenes inside the urbanity. I underline what we hide behind the mask: feelings, emotions and fragility. My goal is to inspire and to create reflection about the way we live in modern society.

In my social art projects, I create an empathic bond with the community, and I use art to get a social impact, and with the right conditions, a social change. In order to get it, I collaborate with local organizations and governments.

We look at each other
